To practice DSP algorithm on MSP430 microcontroller, i am working on a project "Mains Monitor" which is basically a spectrum analyser which will monitor AC mains voltage using Fast Fourier Transform (FFT) and show spectrum frequency domain on a graphical LCD, the spectrum can be used to view if any harmonics present in the mains voltage which will ultimately determines the quality of the supply.

Measuring True RMS Mains Voltage and Frequency using ...

It'll be much easier to Google the mains frequency for where you live. (Or even, 'gasp' let Quora know where you live so they can tell you!). It will either be 50 or 60 Hz. (No one on Earth generates mains A/C power at any other frequency). Alternatively, look at the tab on the back of a large electrical appliance.
